

Post Lockdown Re-Entry

As we prepare to recover from one of the most severe events to hit our country this century, Hawkeye Solutions would like you to know that we are with you every step of the way. We have taken the liberty to implement a few guidelines to assist you along this path.

If your company was in lockdown and your staff were at home, the question must be asked: Do they pose a risk re-entering the workspace? Whilst it may come across as harsh, this event has shaken our country and every precaution must be taken to curb the spread of the virus.

The biggest issue we face is uncertainty. How do we know if someone is infected, and the simple answer is that if they do not present any symptoms, then we don't. This however does not limit certain measures that can be put in place.

Entry Points

- Sanitising stations to include alcohol based and non-alcohol based Sanitiser
- Surgical & Fabric Masks
- Goggles
- Surgical Gloves
- Sani Wipes
- IR Temperature Reading
- Disposable foot wear

****We know that there is a lot of controversy on all of the items listed above. Hawkeye Solutions does not align itself with any one opinion, we prefer to give our clients the power of choice on what measures they would like to take.*

Public Points

- Bathrooms
- Staircase rails
- Door handles / Window handles
- Kitchens
- Open plan offices
- Workstations
- Lift buttons

Whilst these areas are difficult to police, there are measures which can be put in place to curb the spread.

- Anti-microbial Fogging
 - Aerosol Dispensers or Fogging
- Create Awareness:
 - Posters regarding Covid 19
 - The benefits of Social Distancing, even in an impractical setting
 - How quickly germs can spread
- Increase Cleaning Frequency

- Identify hotspots that would be in need of the cleaning frequency to be increased. This would include bathrooms, kitchenette's, Pause areas, canteens
- Sanitisers
 - Identify strategic places where wall mounted sanitisers would be a benefit.
 - Alternatively, look at medical wipes or surface wipes.
 - Do not rule out Non-Alcohol versus Alcohol
 - Educate staff on the difference between bacteria and a virus. (**Sanitiser only kills bacteria)

Covid-19 Services

Anti-Microbial Aerosols / Fogging

The nature of viruses such as the flu and COVID-19 means that they are able to spread incredibly quickly. Due to their ability to go from one person to another in a flash, preventative methods need to be strictly adhered to.

While there are many ways for you to personally stop the contraction, the truth is that your building may be the main cause of your problems. Buildings often need to be treated the same as a human body, applying a solution to prevent (and sometimes cure) an infection. The number one method to do this is via Anti-microbial fogging.

Our Anti-microbial fog process involves the application of a non-toxic, non-corrosive, non-caustic, non-staining, non-carcinogenic and pH neutral fog to your premises. This misty fog kills all viruses, bacteria and fungi, leaving the building safer than before. It does not stain clothing or counters; and people, plants and pets do not need to be vacated during the process.

This product is perfectly safe, often being used in infectious wards of hospitals with patients remaining. Furthermore, we are able to present an "ATP" test (rapidly measuring actively growing microorganisms through detection of adenosine triphosphate) which proves the efficacy of the application.

Fit for both commercial and domestic locations, Anti-microbial fogging is perfect for schools, offices, hotels, homes and many more places. Whether it is moving into a new home or cleaning an old office, total disinfection is something every building should have.

Hawkeye Solutions is aware of current economic restraints and social distancing practices within our country. Taking this into account, we are also able to provide 110ml / 350ml Individual Steri fog canisters. Canister may be used manually or inserted into a wall mounted dispenser. (Dispensers sold separately) The benefit of a dispensing unit is that it is completely automated and sprays intermittently according to your requirements.

Cleaning Chemicals / Disinfectants

MULTIGUARD

QAC Detergent/Disinfectant/Deodoriser

SOLVDET INTENSIVE CLEANER

PRODUCT DESCRIPTION

Removes oil, grease and fat
Safe on laundry.

Deep Cleaning

- Deep cleaning is different from regular or spring cleaning because it reaches the deep grime and dirt in your home. It covers areas which aren't traditionally covered by a regular or spring clean for example:
- Behind kitchen appliances like the washing machine and oven, cutting through the grime that builds up
- Cleaning under the sink and all kitchen surfaces
- Inside the oven including the oven door glass
- Inside of window frames and patio doors
- ADHOC Inside and outside of all windows
- ADHOC steaming of blinds & curtains
- ADHOC Carpet Cleaning
- ADHOC interior roof trusses
- Full and deep dusting including all the corners of rooms for cobwebs
- Scale removal from all bathroom tiles, kitchen tiles, taps, shower heads etc

- Cleaning of floors using the Pulse Mop System
- ADHOC floor buffing
- Cleaning of Walls, skirtings, scuff marks, plugs & light switches, cupboards, standard light fittings
- ADHOC interior of vacant kitchen, bathroom & bedroom cupboards

Carpet Cleaning

The average human loses approximately 50 million skin cells per day. 1 third of that goes into their mattress, 1 third goes into their office environment and the final third is scattered amongst their social time. Take a moment and let that sink in. 16 million skin cells per 8 hour sleep cycle are going into your linen and mattress. Furthermore if you work in an office with let's say, 50 employees, that equates to 833 million dead skin cells floating in the air you breathe, settling in the upholstery and carpeting. Not to mention in the cup you use, or the glass you drink out of. With regular deep cleaning of all areas, especially the carpets and upholstery, one is able to prevent the build-up of these cells.

A business flourishes when its employees are happy, healthy and productive. For this reason, occupational health and safety has become a more than just a requirement. Yet so many companies overlook the one potential health hazard that could be posing a risk to its employees. The culprit? Dirty carpets and upholstery.

While most commercial cleaning services focus on visible surface dirt, many ignore the dust, mould, spores, bacteria and allergens that could be harboured deep within the carpet, resulting in poor indoor air quality and exposure to toxins. It may seem far-fetched, but studies show that improperly maintained office carpets could be responsible for increased workplace illnesses and reduced productivity. These are just some of the possible health issues that your employees, clients and visitors might experience if you let your carpets go uncleaned for long periods:

Respiratory Illness: When inhaled, the bacteria and allergens that build up in the carpet's surface can cause flu-like symptoms and other respiratory problems. In other instances, this could also trigger asthma attacks in employees. "Recent studies of Occupational Health identifies volatile compounds found in filthy carpets as a definitive cause of asthma for people who don't have the disease yet."

Skin Irritation & Infection: When a person comes into contact with a fungi-infested carpet, couch or other upholstered furniture, they could experience serious skin problems such as rashes, itching, athlete's foot or skin asthma.

Allergies: Dirty carpets make the perfect breeding ground for dust mites and other microscopic pests, which are the leading cause of allergic reactions in the home and office. These allergies can manifest as mild symptoms like sneezing and headaches or even fatal anaphylactic reactions in severe cases.

Hawkeye Solutions has a reputation in the industry of tailor making custom solutions to suit every client's needs and budget. We have always kept our word and never wavered. It is this that has allowed us to build long lasting relationships with our clients and support each other during these tough times.

We hope we can be of further assistance to you.
